

Measurement Problems that Plague Us

Beth Layman

12th Annual PSM Users Conference

July 18, 2008

Mystic, Connecticut

Premise

- Same measurement problems keep afflicting us
 - Time Reporting
 - Resource Management
 - Project Status
- Problem is not technology or maturity
- Problems caused by lack of:
 - Good measurement design
 - Supporting process, clear roles, & infrastructure
 - Organizational change management

Time Reporting

LAYMAN & LAYMAN

Gene, don't forget to approve my timesheeeeeet!

- Time Reporting Systems are:
 - not enforced
 - difficult to use
 - too tied to financial systems – billable, OT, other
 - not designed to fit (don't collect right attributes)
 - not comprehensive - contractors, managers, etc.
- Data is often misused or not used
 - Dirty Data
 - Poor analyses
- No effort data...no baselining, benchmarking, productivity, project tracking, estimation improvements...no nothin'!³

Cultural Problems

LAYMAN & LAYMAN

- Waste of time; non-value added
- Fear of exposure
 - "I decide what I'll spend time on – I'm a professional"
- Fear of telling the "real story"
 - "But then the management team will actually know whether we are on budget or not..."
- Fear of dis-empowerment
 - Managers/PI team/HQ will micromanage, when they should be looking at higher levels of abstraction for trends and corrective action
 - Being surprised when someone else reports on your data
- Fear of misunderstanding
 - Data will be interpreted by someone without understanding the context or "whole story" (Measurement team, upper management, etc.)
 - "Of course I #)@(take longer than Ted – his stuff never works"
- Fear of measuring people, not process
 - People have been "burned" in the past and don't believe this will be different
 - Fears include: use to compare, reward/not, fire/outsource

4

WIFM = Information Needs

- ❑ The **CIO** needs to understand actual project performance (productivity rates) in order to avoid over-committing and to match workforce capacity with workload.
- ❑ The **Project Manager** needs to understand effort required to complete project activities in order to adjust task assignments.
- ❑ The **Project Office/EPG** needs to understand effort required to complete project activities in order to calibrate and improve estimation and planning models.
 - Effort profiles of past projects to validate current project estimates.

5

Time Reporting – The Solution

The screenshot shows a web-based time reporting application. The interface includes a navigation menu with options like 'View Sheets', 'Insert / Export', 'Reports', 'Process Management', 'System Configuration', and 'Account Administration'. The main content area displays a 'Timesheets' table with columns for 'Activity Name', 'Activity ID', 'Activity Status', 'Project Name', and days of the week (Mon, Tue, Wed, Thu, Fri, Sat, Sun). A 'Total' column is also present. Overlaid on the screenshot are several text boxes with blue borders and white backgrounds, each containing a blue square icon and text:

- Employee
- Project ID/Charge#
- Phase/Activity
- Work Product/Work Package
- Date
- Actual Time Spent (Hours)

The background table shows data for activities like 'Autumn Exercises Assisted' and 'CPM Implementation' with corresponding hour values for each day and a total. A 'Project Assignments' table is also visible at the bottom, showing dates and hours for various activities.

Time Reporting – Institutionalizing it

LAYMAN & LAYMAN

- WIFM Selling
- Need central function to coordinate & support (PMO)
 - Need someone to write the queries, exports, glue code
 - For purchased or hosted solutions, still need:
 - Development of internal tool SMEs
 - Training/roll-out
 - Process/tool integration
 - Home-grown systems require support like any other tool
- Time System KPIs
 - Late submittals
 - Late approvals
 - # rejections
- TimeSheet and Process Audits
- Demand-Pull
 - Show PMs how to use it to sanity check weekly
 - Let PMs analyze and report on it
 - Have managers looking at KPIs & data (over the long-term)

7

Resource Management

LAYMAN & LAYMAN

- Today's solutions require cross-functional teams
- Too much work and not enough resources
- Conflicts for key people's time
- People guess at what's most critical
- Some resources are burned out – attrition and sickness is high
- No visibility into resource overload/conflicts
- No single source of truth for commitments

Drowning in the Project Resource Pool, Dick Billows

8

Resource Mgt - Context

Production Work

- Ops & Client Support
- Ongoing
- Functional Management
- Follows SOP/std process
- Goal: efficient support

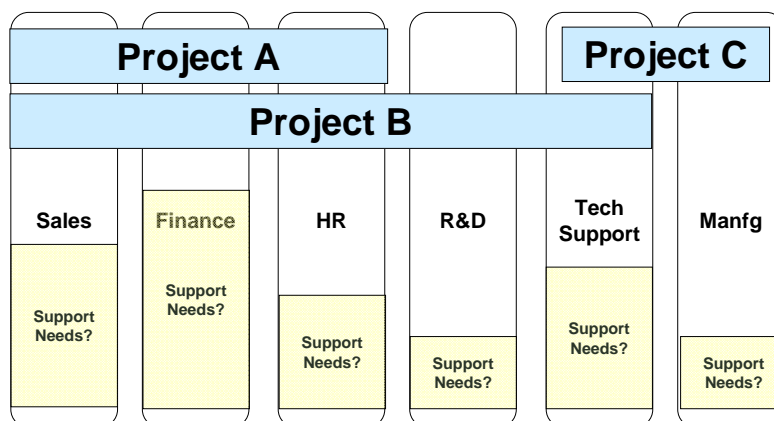

vs

Project Work

- Varied
- Begins and Ends
- Project Management
- Follows project plan
- Goal: successful change

9

The Messy Matrix

10

Resource Mgt – Example

IT Market Management Staff allocation spreadsheet

Document owner: Abhinav Katoch

Resource Mgt – Institutionalizing it

- ▣ PMO-like Coordination & Support (again)
- ▣ Need portfolio and project governance (clear roles & decision authority)
- ▣ Need Demand-Pull
 - Show it to everyone – give everyone read access
 - Ask functional mgrs to analyze and report on it
 - ▣ Have execs looking at it (over the long-term)
 - Evolve to thresholds/KPIs

15

Project Status Reporting

- Execs and Project stakeholders need to be informed of status
- Project reporting isn't:
 - consistent across projects
 - quantitative
 - objective
 - informative
 - used
- Project reporting is:
 - Time consuming
 - Too much cut-and-paste

16

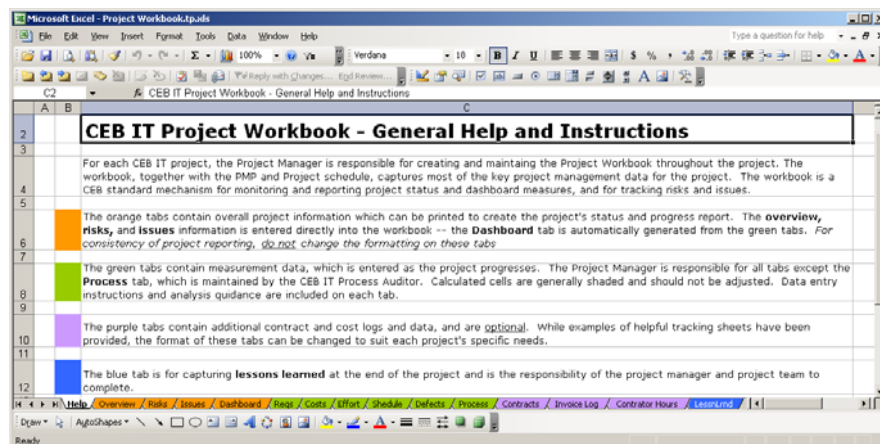

Status Reporting – The Solution

- Simple project workbook that lives in a collaborative workspace
 - Allow variations for different projects
 - Size/Reqs might be stories, RTM lines, CRs
 - Key milestones match life cycle (maint, dev, release, iterative)
- Project status (qualitative) + dashboard (quantitative)
 - Presented dynamically at mgt & project steering reviews
- Data can be supplied by various sources
- Data can be mined for organizational measurement purposes

17

Status Reporting – Example

18

Status Reporting – Institutionalizing it

- Make it interactive vs. email
- Build into existing meeting forums
- Workbook and Process Audits
- Create Demand-Pull
 - Work with management to:
 - adopt the “right” posture (don’t dis-empower)
 - ask the “right” questions during the reviews (individual chart and integrated analysis guidance)

19

What Helps

- Project Management Offices
 - Providing infrastructure to support measurement
- Portfolio and Project Mgt Processes
 - Integrating Process and Measurement
 - Building in Demand-Pull
- Process Audits/Checks
- Rewards
- Organizational Change Mgt Focus
 - Burning Platform
 - Leadership Alignment and Participation (see next)

20

Example-Helping Mgrs Lead...

- ❑ What are your main responsibilities? (There are 4 of them)
 1. DRIVE PI PLANS
 - ❑ create vision and desire for change
 - ❑ approve all PI strategies, plans, roadmaps
 - ❑ ...including Measurement & Training Plan development and execution
 2. COMMUNICATE regularly about PI program to your teams
 - ❑ tie business objectives of the organization to PI program
 - ❑ review plans, scope, upcoming events, expectations
 3. Provide CONSEQUENCES for "not doing" it
 - ❑ ENFORCE compliance
 - ❑ tie to CDP/annual reviews
 4. MONITOR & CONTROL PI Program progress
 - ❑ treat it like any other project
 - ❑ remove roadblocks
