

Practical Software and Systems Measurement

Please use Slides #2-7 for your introductions and slides #8-13 for your outbrief on Friday, 18 July

Practical Software and Systems Measurement

Practical Software and Systems Measurement

A foundation for objective project management

Measuring in Services Mgt

Tuesday, July 15th

Beth Layman

PSM Users Group Conference

14-18 July 2008

Mystic, Connecticut

Practical Software and Systems Measurement

Measuring in Services Management

- ***Service Management***
 - ***Focus on ongoing IT service operations - day-to-day activities (vs. projects)***
 - ***Involves the operation of hardware, software, applications, data, and networks needed to run the business***
- ***Industry models: ITIL, ISO/IEC 20000, eSCM-SP, COBIT, eTOM, and SMBOK***
 - ***Process Areas we'll focus on – Event, Incident, Problem, Release, Change Mgt; Request Fulfillment, Service Desk, Capacity Management***
- ***Measurement is key to effective management***

Objectives of the Workshop

- ***Begin to examine the proper use of measurement in service management/service operations***
- ***Develop a preliminary list of common information needs and potential measures that are useful in this domain***
- ***Provide lessons learned, barriers, data quality issues, best practices, how to establish baselines, etc.***
- ***Provide examples of good practice***

Practical Software and Systems Measurement

Workshop Agenda

<i>1:30 – 2:00</i>	<i>Introductions – Participant Analysis</i> <i>-Your role in Ops, models your shop uses, maturity of shop</i>
<i>2:00 – 2:30</i>	<i>Review of ITIL process areas of focus</i> <i>-Mapping to org structures, technology</i>
<i>2:30 – 3:00</i>	<i>Common issues & information needs in ops shops</i> <i>-brainstorming & discussion</i>
<i>3:30 – 4:00</i>	<i>Available examples of measures to meet needs</i> <i>-Show-and-tell; best practices</i>
<i>4:00 – 5:00</i>	<i>Drafting of ICM entries/measurement specs</i> <i>-break outs</i>

Workshop Background

- ***PSM history in this area***
- ***Where we're heading***
- ***Issues, questions, and topics***

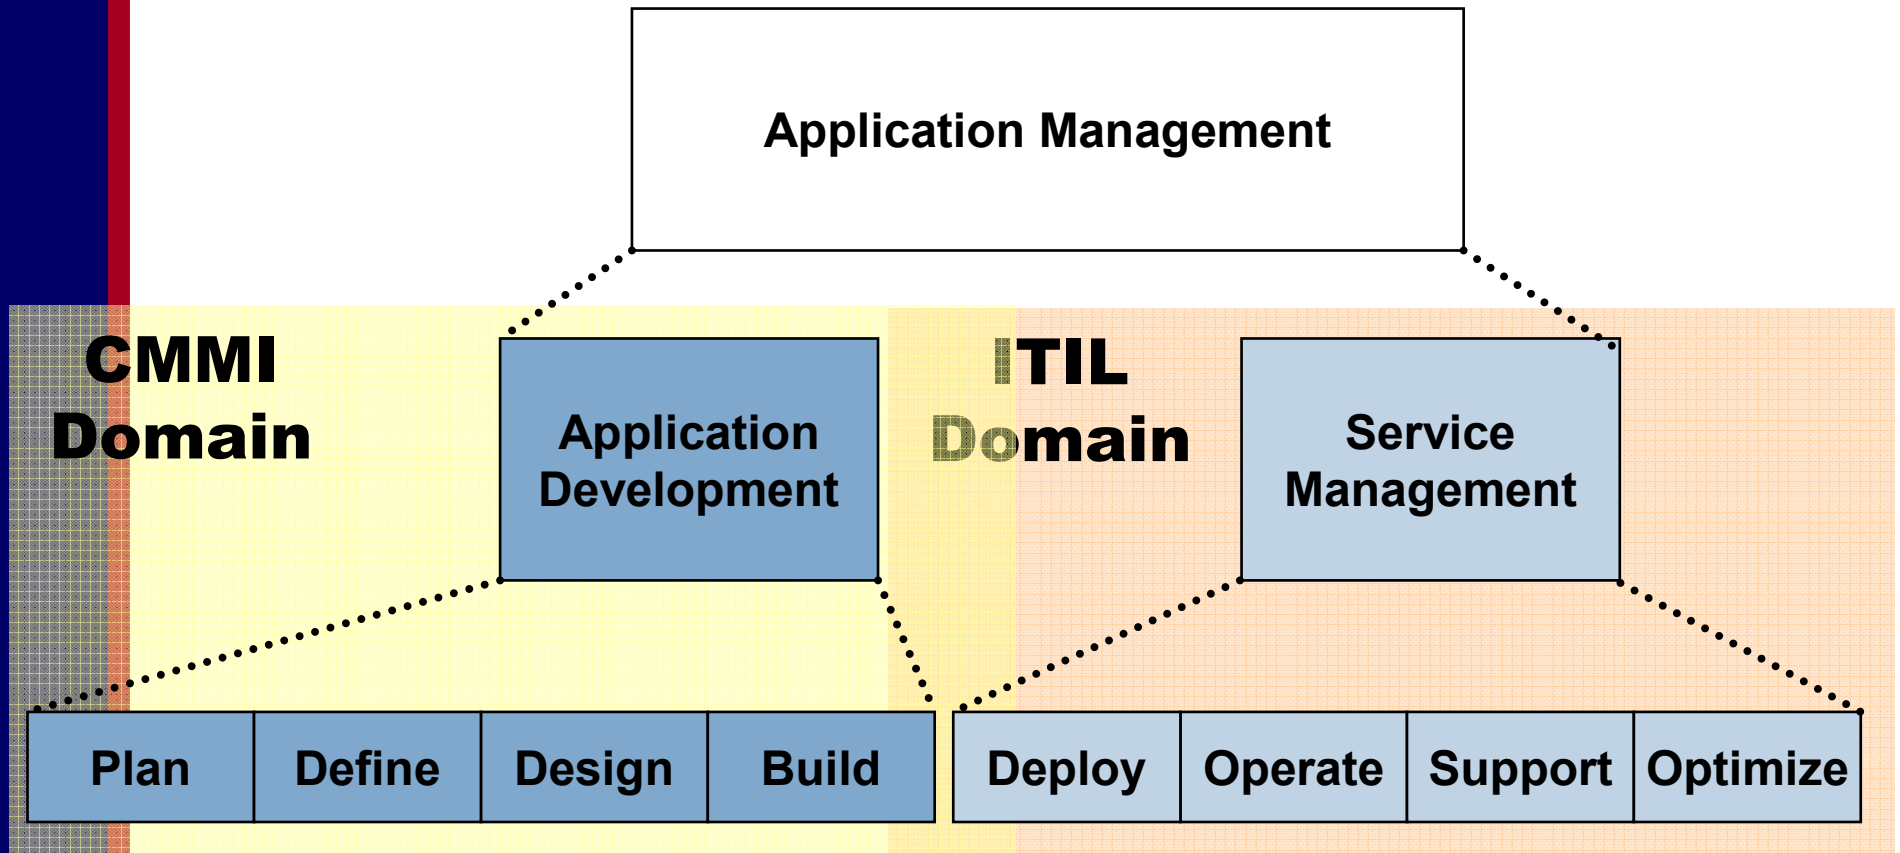

Practical Software and Systems Measurement

Intended Output

- ***Drafted ICM table***
- ***Recommendations/plans for continued evolution***

Practical Software and Systems Measurement

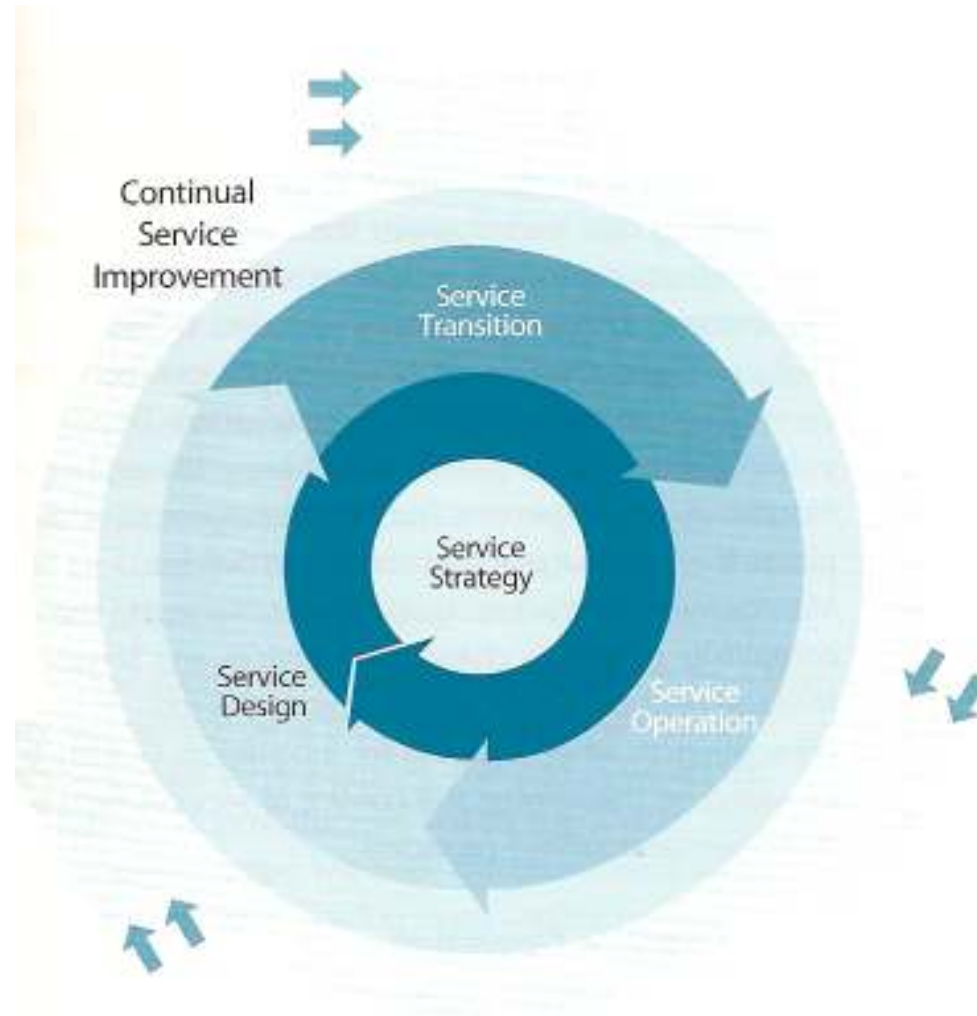

Service Management in Context

Source: ITIL: Application Management (2002, p.7)

Practical Software and Systems Measurement

IT Infrastructure Library (ITIL)

Practical Software and Systems Measurement

Initial PSM-ITIL Areas of focus

Units of Work

- **Change Management (Transition)**
- **Incident & Problem Management (Ops)**
- **Request Fulfillment (Ops)**
- **Event Management (Ops)**

Capacity Management (Design)

- **Personnel**
- **Hardware, SW, Network, etc.**

Looking at these areas as a starting point will help with SLM

Change Management

- ***Change Request (RFC): A formal proposal for a change to be made.***
 - ***Examples: Push application release into production, fix a production problem***
 - ***An implementation of new functionality***
 - ***Any repair to an interruption of service***
 - ***Any repair of existing functionality***
 - ***Any removal of existing functionality***
 - ***Change Advisory Board (CAB)***
 - ***Issues: Unauthorized changes, unsuccessful changes, emergency changes***
 - ***Considerations: Risk of making the change, Relationship to other activities, Return expected if change is made***

Incident/Problem Management

- ***Incident: Any unplanned interruption to an IT service or reduction in the quality of the service***
- ***Problem: The CAUSE of one or more incidents***
 - ***Reporting Sources***
 - ***Categories***
 - ***Urgency, Prioritization, Impact***
 - ***SLA – timescales***
 - ***Incident: Problem relationship***
 - ***Status***
 - ***Resolution (and Satisfaction with)***

Request Fulfillment

- ***Request: Demands placed on IT by the users (Help Desk/Service Desk)***
 - ***Give access to user, install SW, move a PC***
 - ***These things can and should be planned (vs. incident)***
 - ***When needed***

Event Management

- ***Event: Any detectable occurrence that might cause a deviation to service***
 - ***Categories:***
 - ***Normal Events: Scheduled operation starts, completes; user logs into an application,***
 - ***Exception Events: Smoke, fire, license violation, security (intrusion detection), application failure, poor server performance***
- ***Significance Categorization***
 - ***Informational, Warning, Exception***
- ***Event Response***

Capacity Management (HW/SW)

- ***Monitoring performance, utilization patterns, and throughput***
- ***Levels, layers, and relationships are important***
 - ***Business: Number of orders processed***
 - ***Service: Transaction rates/response times***
 - ***Component: Network link performance***

Capacity Management (People)

- ***Workload → Resource relationship***
- ***Issues: Not enough personnel to meet SLA targets, given current/projected workloads***

Practical Software and Systems Measurement

Insights Needed

- ***Monitor and Control Operations***
 - ***(SLA) targets being met***
- ***Stability of Operations***
- ***Predicting Future Needs***
 - ***e.g., Volumes = Workforce***
- ***Improvements over time***

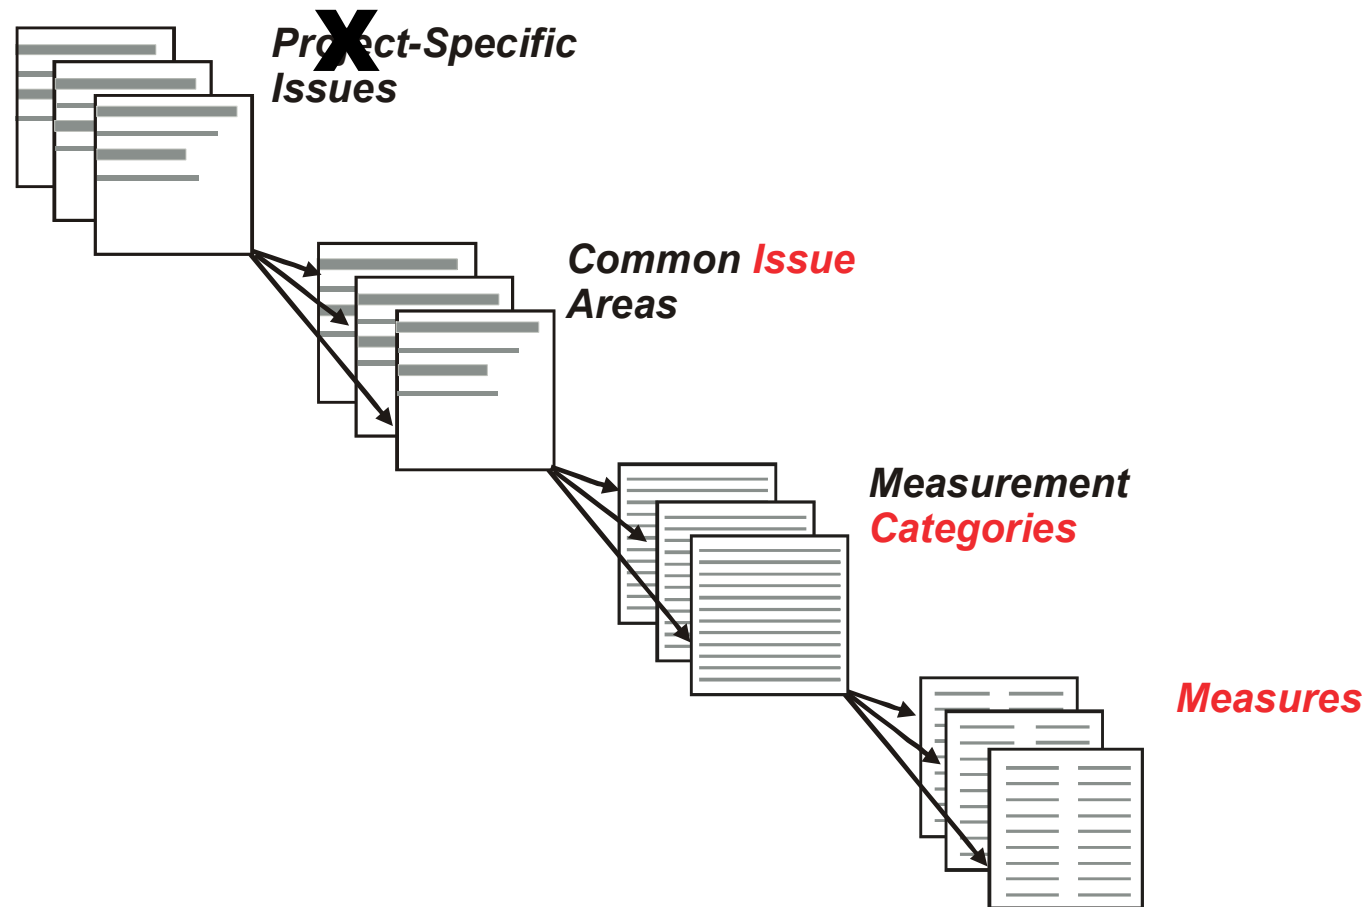

Practical Software and Systems Measurement

Workshop Agenda

1:30 – 2:00	Introductions – Participant Analysis <i>-Your role in Ops, models your shop uses, maturity of shop</i>
2:00 – 2:30	Review of ITIL process areas of focus <i>-Mapping to org structures, technology</i>
2:30 – 3:00	Common issues & information needs in ops shops <i>-brainstorming & discussion</i>
3:30 – 4:00	Available examples of measures to meet needs <i>-Show-and-tell; best practices</i>
4:00 – 5:00	Drafting of ICM entries/measurement specs <i>break outs</i>

Some examples-1

		Impact		
		High	Medium	Low
Urgency	High	Priority: Severity 1 Response Time: 30 min. Target Resolution Time: 2 hrs.	Priority: Severity 1 Response Time: 30 min. Target Resolution Time: 2 hrs.	Priority: Severity 2 Response Time: 60 min. Target Resolution Time: 8 hrs.
	Low	Priority: Severity 1 Response Time: 30 min. Target Resolution Time: 2 hrs.	Priority: Severity 2 Response Time: 60 min. Target Resolution Time: 8 hrs.	Priority: Severity 3 Response Time: 24 hours Target Resolution Time: Best Effort

Urgency	Description	Ask the question:	Can The User Work?
High	<ul style="list-style-type: none"> Critical Server Outage Network Outage Key Application Outage Critical User 		No
Medium	<ul style="list-style-type: none"> Non-critical Server Outage Non-essential Application Outage Reduced performance of critical system or network. 		Yes, with some issues
Low	<ul style="list-style-type: none"> No Outage Workaround Available Support Services (installs, office moves, etc.) 		Yes, with no issues or a known error
Impact	Description		
High	<ul style="list-style-type: none"> > 5 incidents on same issue > 5 people affected Critical User 		
Low	<ul style="list-style-type: none"> < 5 incidents on same issue < 5 people affected 		

Practical Software and Systems Measurement

Some examples-2

Change Acceptance Rate

- ***Number of RFCs submitted/rejected***
 - ***H igh > 99%***
 - ***A ccept ≥ 95% ≤ 99%***
 - ***L ow < 95%***

Incidents attributed to Changes

- ***Number of Incidents/problems resulting from an implemented RFC***

Service Desk is Single Point Of Contact for Customer Incidents (Total Volume)

- ***H igh > 95%***
- ***A ccept > 70% ≤ 95%***
- ***L ow ≤ 70%***

Percentage Resolved – 1st Call

Percentage Incidents Escalated

Restore Normal Service 1st Call Avg. Time (Aging)

Number of System Outages Due to Out of Space Condition

All systems maintain at least 10% free capacity at all times
