# 2016 PSM Workshop on SoS Measurement

## *PRACTICAL SOFTWARE AND SYSTEMS MEASUREMENT*

### *Participants*

Mike Yokell	Lockheed Martin
Kirk Michelson	Tackle Solution
Mark Jones	CAST / CISQ
J. Patrick Van Metre	MITRE
Mimi Hailegiorghis	MITRE
Judith Dahmann	MITRE
Lisa Oakley Boglewic	MITRE
William H. Golaz	Lockheed Martin
Cheryl L Jones	USARMY ARDEC
Garry Roedler	Lockheed Martin

PSM c#

February 2016

February, 2016 PSM User's Group in Arlington, Virginia

MITRE

# Topics

---

- Background and motivation
- Systems of Systems
  - Systems of Systems Engineering SoSE defined
  - An Implementers View of SoSE
- Workshop description
- Questions driving measurement at each step of SoSE implementation
- Results of workshop

# SoS Background and Motivation

- **Growth in Systems of Systems (SoS)**
  - SoS are prevalent in military and non-military domains in today's networked environment
  - Most military capabilities depend on multiple systems working together effectively to meet user mission needs
  - However, current defense acquisition is based on the development and engineering of individual systems, often without a clear understanding of the SoS context(s) in which systems will be deployed
- **Need for SoS engineering is recognized**
  - Increased attention is being paid to application of SE across the SoS supporting missions
  - SoS pose challenges for current SE practice resulting in development of approaches to SoSE

**To date, there has been little attention to SoS measurement**

# System of Systems

A set or arrangement of systems that results when **independent and useful systems** are integrated into a larger system that delivers unique capabilities

## Systems of Systems Engineering

The process of planning, analyzing, organizing, and integrating the capabilities of a mix of **existing and new systems into a system-of-systems capability** that is greater than the sum of the capabilities of the constituent parts

### Maier (1998) five key characteristics of SoS

- **Operational independence** of component systems
- **Managerial independence** of component systems
- Geographical distribution
- Evolutionary development processes
- Emergent behavior

# Maier SoS Characterization

- Maier (1998) postulated five key characteristics of SoS:
  - Operational independence of component systems
  - Managerial independence of component systems
  - Geographical distribution
  - Evolutionary development processes
  - Emergent behavior

# Scale and Scope of SoS

← Technical ----- Socio-Technical ----- Enterprise →

# SoS Types

- **Directed**
    - SoS objectives, management, funding and authority; systems are subordinated to SoS
  - **Acknowledged**
    - SoS objectives, management, funding and authority; however systems retain their own management, funding and authority in parallel with the SoS
  - **Collaborative**
    - No top down objectives, management, authority, responsibility, or funding at the SoS level; Systems voluntarily work together to address shared or common interest
  - **Virtual**
    - Like collaborative, but systems don't know about each other
- Many SoS exist but are **not recognized** and develop and evolve without benefit of SE
  - Types apply when the SoS is **recognized** and treated as an SoS
  - In reality, most actual SoS are a combination of these types

# SoS Domain

**Missions**  
Sets of systems working together to provide a broader capability or mission

**Platforms**  
A military platform (e.g. ship, aircraft, satellite, ground vehicle) equipped with independent systems (e.g. sensor, weapons, communications) needed to meet platform objectives

**Information Technology**  
Networked information systems to support operations within or across platforms or systems to meet mission or capability objectives

# Investigations Into SoS SE for Defense & Beyond

**DAU**  
Defense Acquisition University

**Systems Engineering for Systems of Systems**

**Evolving DoD Perspective on SoS**

Over the past five year, the DoD has begun addressing aspects of SoS through a variety of approaches, often driven by policy direction through the Quadrennial Defense Reviews (QDRs). The chart below displays a timeline of SoS related DoD activities. The specifics are of less importance here than the fact that through a variety of initiatives the DoD has been exploring ways to address the growing reality of SoS to meet war fighter needs.

- Course Overview
- SoS in the DoD Today
- Introduction
- Evolving DoD Perspective on SoS
- Definition and types of SoS
- Comparing Systems and SoS
- Core Elements of SoS SE
- Applying Basic SE Principles to SoS
- SE Planning for SoS
- Emerging principles for SoS SE
- Summary

**BKCASE**

**Systems of Systems (SoS)**

System of systems engineering (SoSE), while not a new discipline, is an Century (Jamshidi 2009a). While systems engineering is a fairly established general, SoSE requires considerations beyond those usually associated

# SoSE Wave Model – Implementer's View

An evolutionary systems engineering approach to evolving complex systems and systems of systems

- Recognizes need for disciplined iterations to systematically address impacts of inevitable change
  - Backbone of ongoing analysis
  - Architecture evolution
  - Overlapping iterations
  - Forward movement with feedback

Provides a framework for addressing SoS measurement

# Practical Systems and Software Measurement Workshop Context

PRactical SOFTWARE AND SYSTEMS MEASUREMENT

## Practical Software and Systems Measurement

Objective Information for Decision Makers

SoS Measurement

Cheryl Jones, Army

PSM #1

February 2016

PRactical SOFTWARE AND SYSTEMS MEASUREMENT

## Objectives of the Workshop

- *Layout the basic characterization of SoS, the SoS engineering workflow and the implications for measurement, with an example*
- *Review the PSM measurement approach to assess how it applies or can be adapted to SoS, including challenges and opportunities*

PSM #1

February 2016

Join with the system measurement community to address  
SoS measurement

# Workshop Format and Intended Output

**PRACTICAL SOFTWARE AND SYSTEMS MEASUREMENT**

## Workshop Format

### SoS Analysis

Provides analysis of the 'as is' and basis for SoS evolution

### Architecture

Develops and evolves the persistent technical frameworks for addressing SoS evolution

### Plan/Implement

Plan SoS Update evaluates the SoS plan, updates and backlogs to define the plan for the next SoS upgrade cycle.

Implement SoS Update involves the SoS SE team monitoring, implementation of the consistent system level and plans and conducting SoS level testing, resulting in a new SoS product baseline. The system is updated and the next SoS SE team leads SoS integration and test, developing data on SoS performance and addressing any unanticipated factors encountered.

- Each participant to provide ideas on post-its
  - **Questions** (Information Needs)
  - What are some **Conceptual Measures** for the indicators?
  - What are **Prospective Indicators** for that questions?
  - Note if this applies to **SoS** or to the **Systems**?
  - **Challenges/Risks** for SoS

PSM r13 February 2016

**PRACTICAL SOFTWARE AND SYSTEMS MEASUREMENT**

## Intended Output

Question Indicator Measure

Question	Indicator	Measure

- Questions
- Measures
- Indicators

First Step to Develop ICM for SoS and SoS White Paper

PSM r13 February 2016

First step is to understand unique SoS measurement issues

# Information Category-Measurable Concept-Prospective Measures (ICM) Table

Information Category

Measurable Concepts

Questions

Indicators

Measures

Notes

Information Categories	Measurable Concepts	Questions Addressed	Prospective Indicators	Measures	Notes
Project Schedule and Progress	Milestone Completion	Is the project or service meeting scheduled milestones? Are critical tasks or delivery dates slipping?	- Milestone Progress	- Number of milestones started and completed versus plan	- Completion should be based on achieving specific quantifiable milestone completion criteria - Include updates as schedules change - Milestones may include inch stones, or major critical milestones - Might also look at critical path performance (slack time)
	Work Unit Progress	Are specific activities and products completed as scheduled?	- Requirements Progress - Problem Reports Progress - Reviews Progress - Change Requests Progress - System Elements (Units) Progress - Test Cases Progress - Action Items Progress	- Requirements defined, traced, verified, validated - Problem reports discovered, closed - Reviews completed - Change requests opened, resolved - System elements designed, implemented, integrated, approved, qualified, accepted - Test cases developed, attempted, passed - Action items opened, completed	- Other work unit progress measures may be defined based on the work in progress - Other schedule performance indicators are included with financial performance indicators (e.g. earned value measures)
	Work Backlog	Is the backlog of work units growing? Has the backlog of work units been adequately addressed?	- Work Unit Backlog Trends - Burndown Rates	- Work units in backlog, work units in backlog resolved	- Measure/categorize by priority level and age - Work units may be -- actions, assignments -- service requests -- story points or features -- maintenance actions -- open defects or open stakeholder problem reports
	Incremental Capability	Is capability being delivered as scheduled in incremental builds, releases, or service provisions?	- System Elements Integrated - Functionality Integrated	- Systems elements integrated (planned versus actual) - Functions integrated (planned versus actual)	
Resources and Cost	Financial Performance	Is the project or service meeting budget and schedule objectives? Is the project or service at risk of exceeding established cost and schedule objectives?	- CPI, SPI Trends - Earned Value Cost and Schedule Variance - Budget Adequacy and Trends - Cost Trends - Cost and Schedule Impact Risk Trends	Earned Value: - Budgeted Cost of Work Scheduled (BCWS) - Budgeted Cost of Work Performed (BCWP) - Actual Cost of Work Performed (ACWP) - Budget at Completion (BAC) - Latest Revised Estimate (LRE) - Estimate at Completion (EAC) - Budget, planned, and actual costs - Cost and schedule risk	- For deployed systems, costs include those to operate, maintain (resolve problems), and enhance system - Include updates as funding changes - For risks, develop a range of cost values with associated probabilities, not just a single "cost" value, to facilitate improved awareness of potential cost exposure. Note that this should be related to both cost and schedule risk.
	Personnel Effort	Is effort being expended according to plan? Is there enough staff with the required skills?	- Staff Level Sufficiency - Effort Distribution and Trends - Skill Profiles - Staff Turnover Rates	- Number of staff on project and projected - Number of staff by skill level - Number of staff by activity - Staff added, removed, quit	- Can also focus on key staff - Effort distribution and trends by activity provides a more detailed profile - Look at these measures for the current state and future projection - Skills include expertise, experience, training, education, and domain knowledge
	Facilities and Support Resources	Are needed facilities, equipment, tools, and materials available as needed to meet milestones?	- Resource availability - Resource utilization	- Quantity needed, available - Time required, available, used	
	Size and Stability	Physical Size and Stability	How big is and how much change is occurring with the product's physical size, physical characteristics, or interfaces?	- System Element Trends - Interface Complexity - Interface Compatibility - Lines of Code Trends	- System elements added, modified, deleted - Interface number (unique), complexity, growth, approval rates, changes, TBD/TBR closure per plan - Lines of code added, modified, deleted - Number added, modified, deleted
Functional Size and Stability	How big is and how much change is occurring with the product's functional size, content, or logical characteristics?	- Requirements Trends - Architecture Element Trends - Functional Element Trends - Work Unit Backlog Size Trends - Function Points Trends - Call Center Request Trends - TBD/TBRs Trends	- Number added, modified, deleted	- This can be applied at any part or level of the system definition - Functional architecture changes can be at the level of architecture description, model, or elements - Call center requests can be categorized as problems or enhancements	

- PSSM product
- Provide set of **reusable** measures
- Currently focused on **project** measurement

Can the current ICM be applied or adapted to **SoS**

# SoS Workshop Approach Address Core Elements of ICM for SoS

**Question    Indicator    Measure**

Information Categories	Measurable Concepts	Information Category - Measureable Concepts	Prospective Indicators	Sample Base Measures	Notes
Project Schedule and Progress	Milestone Completion	Is the project or service being scheduled as milestones?	- Milestone Progress	- Number of milestones started and completed versus plan	Completion should be based on achieving specific measurable milestone completion criteria Include updates as schedule changes Milestones may include such items, or major critical milestones Might also look at critical path performance (slack time)
	Work Unit Progress	Are specific work units and processes completed as scheduled?	- Requirements Progress - Problem Reports Progress - Reviews Progress - Change Requests Progress - System Elements (Units) Progress - Test Cases Progress - Action Items Progress	- Requirements defined, traced, verified, validated - Problem reports discovered, closed - Reviews completed - Change requests opened, resolved - System elements designed, implemented, integrated, approved, qualified, accepted - Test cases developed, attempted, passed - Action items opened, completed	Other work unit progress measures may be defined based in the work in progress Other schedule performance indicators are included with financial performance indicators (e.g. earned value measures)
	Work Backlog	Is the backlog of work units growing? Is the backlog of work units being adequately addressed?	- Work Unit Backlog Trends - Burndown Rates	- Work units in backlog, work units in backlog resolved	Measure/categorize by priority level and age Work units may be: - actions, assignments - service requests - story points or features - maintenance actions - open defects or open stakeholder problem reports

Resources and Cost	Financial Performance	Is the project or service meeting budget and schedule objectives? Is the project or service at risk of exceeding established cost and schedule objectives?	- CPI, SPI Trends - Earned Value Cost and Schedule Variance - Budget Adequacy and Trends - Cost Trends - Cost and Schedule Impact Risk Trends	- Earned Value - Budgeted Cost of Work Scheduled (BCWS) - Budgeted Cost of Work Performed (BCWP) - Actual Cost of Work Performed (ACWP) - Budget at Completion (BAC) - Latest Revised Estimate (LRE) - Estimate at Completion (EAC)	For deployed systems, costs include those to operate, maintain (solve problems), and enhance system Include updates as funding changes For risks, develop a range of cost values with associated probabilities, use just a single 'cost' value to facilitate improved awareness of potential cost exposure. Note that this should be related to both cost and schedule risk.
	Personnel Effort	Is effort being expended according to requirements? Is there enough staff with the required skills?			
	Facilities and Support Resources	Are needed facilities, equipment, tools, and materials available as needed to meet requirements?			
Size and Stability	Physical Size and Stability	How big is and how much change is in the product's physical size, physical characteristics, and interfaces?			
	Functional Size and Stability	How big is and how much change is in the product's functional size, content, and characteristics?			

## SoS Wave Model Steps

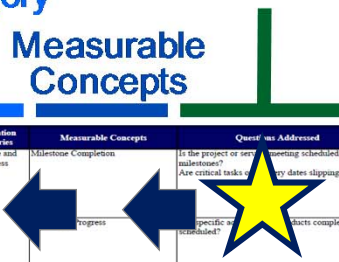

- Initiate SoS:**  
 Provides foundational information to initiate the SoS
- Conduct/Continue SoS Analysis:**  
 Provides analysis of the 'as is' SoS and basis for its evolution
- Develop/Evolve SoS Architecture:**  
 Develops/evolves the persistent technical framework for SoS evolution and a migration plan identifying risks and mitigations
- Plan SoS Update:**  
 Evaluates SoS priorities, backlog of SoS changes, and options to define plans for the next SoS upgrade cycle
- Implement SoS Update:**  
 Oversees system implementations and plans/conducts SoS level testing, resulting in a new SoS product baseline
- Continue SoS Analysis:**  
 Ongoing SoS analysis revisits the state of and plans for the SoS as the basis for SoS evolution

- Start with SoS **questions** addressed at each step in SoSE using the SoS wave model framework
- Identify common **indicators** and **measures** for questions

# Workshop Results

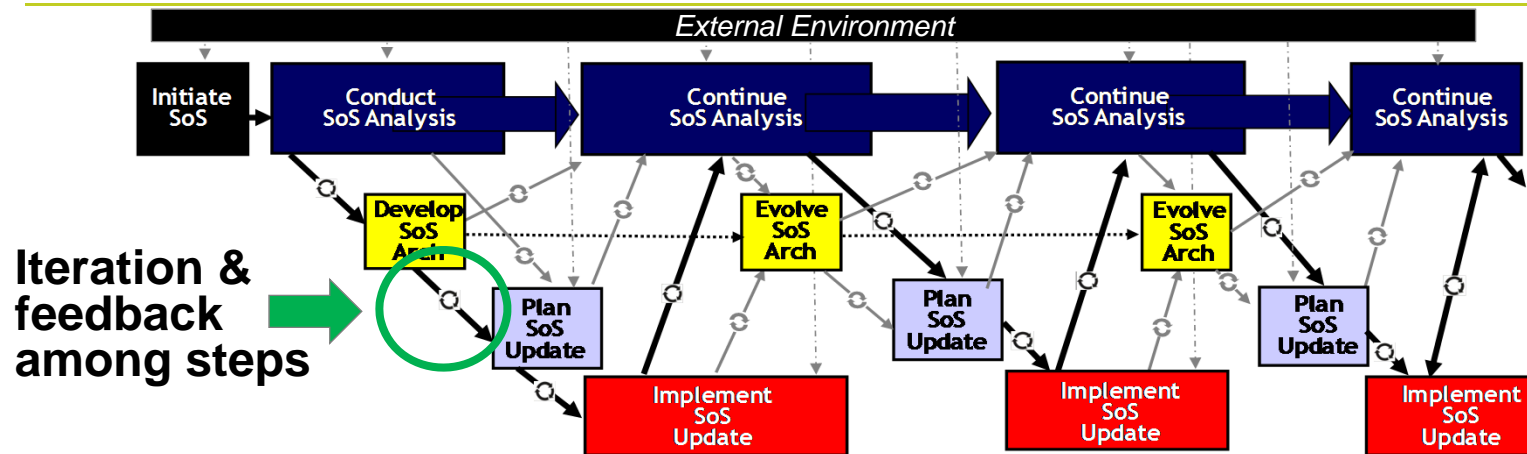

Information Category	Measurable Concepts	Questions	Indicators	Measures	Notes
Project Schedule and Progress	Milestone Completion	Is the project or service meeting scheduled milestones? Are critical tasks on track (any dates slipping)?	Prospective Indicators	Simple Base Measures	Notes
	Progress	Are specific milestones completed as intended?	- Requirements Progress - Problem Reports Progress - Reviews Progress - Change Requests Progress - System Elements (Units) Progress - Test Cases Progress - Action Items Progress	- Number of milestones started and completed versus plan - Requirements defined, traced, verified, validated - Problem reports discovered, closed - Reviews completed - Change requests opened, resolved - System elements designed, implemented, integrated, approved, qualified, accepted - Test cases developed, attempted, passed - Action items opened, completed	- Completion should be based on achieving specific, quantifiable milestone completion criteria - Include updates as schedules change - Milestones may include such stones, or major critical milestones - Might also look at critical path performance (slack time)
	Work Backlog	Is the backlog of work units growing? Has the backlog of work units been adequately addressed?	- Work Unit Backlog Trends - Burndown Rates	Work units in backlog, work units in backlog resolved	- Other work unit progress measures may be defined based on the work in progress - Other schedule performance indicators are included with financial performance indicators (e.g. earned value measures)
	Incremental Capability	Is capability being delivered as scheduled in incremental builds, releases, or service provision?	- System Elements Integrated - Functionality Integrated	System elements integrated (planned versus actual) Functions integrated (planned versus actual)	- Measure/categorize by priority level and age - Work units may be - actions, assignments - service requests - story points or features - maintenance actions - open defects or open stakeholder problem reports
Resources and Cost	Financial Performance	Is the project or service meeting budget and schedule objectives? Is the project or service at risk of exceeding established cost and schedule objectives?	- CPL SPI Trends - Earned Value Cost and Schedule Variance - Budget Adequacy and Trends - Cost Trends - Cost and Schedule Impact Risk Trends	Earned Value - Budgeted Cost of Work Scheduled (BCWS) - Budgeted Cost of Work Performed (BCWP) - Actual Cost of Work Performed (ACWP) - Budget at Completion (BAC) - Latest Revised Estimate (LRE) - Estimate at Completion (EAC) - Budget, planned, and actual costs - Cost and schedule risk	- For deployed systems, costs include those to operate, maintain (resolve problems), and enhance system - Include updates as funding changes - For risks, develop a range of cost values with associated probabilities, not just a single "cost" value, to facilitate improved awareness of potential cost exposure. Note that this should be related to both cost and schedule risk.
	Personnel Effort	Is effort being expended according to plan? Is there enough staff with the required skills?	- Staff Level Sufficiency - Effort Distribution and Trends - Skill Profiles - Staff Turnover Rates	- Number of staff on project and projected - Number of staff by skill level - Number of staff by activity - Staff added, removed, quit	- Can also focus on key staff - Effort distribution and trends by activity provides a more detailed profile - Look at these measures for the current state and future projections - Skills include expertise, experience, training, education, and domain knowledge
	Facilities and Support Resources	Are needed facilities, equipment, tools, and materials available as needed to meet milestones?	- Resource availability - Resource utilization	- Quantity needed, available - Time required, available, used	
Size and Stability	Physical Size and Stability	How big is and how much change is occurring with the product's physical size, physical characteristics or interfaces?	- System Element Trends - Interface Complexity - Interface Compatibility - Lines of Code Trends	- System elements added, modified, deleted - Interface number (usage), complexity, growth, approval rates, changes, TBD/TBR closure per plan - Lines of code added, modified, deleted	- Consider both internal and external interfaces - System elements can include software or hardware elements
	Functional Size and Stability	How big is and how much change is occurring with the product's functional size, content, or logical characteristics?	- Requirements Trends - Architecture Element Trends - Functional Element Trends - Work Unit Backlog Size Trends - Function Points Trends - Call Center Request Trends - TBD/TBR Trends		- Any part or level of the system changes can be at the level of model, or elements - Be categorized as problems or

- For new SoS measurement considerations
  - Identified core questions
  - Discussion focused on measurable concepts and information categories
  - Indicators and measures may not be reusable but more specific to the SoS

# SoS Wave Model Steps

- **Initiate SoS:**

Provides foundational information to initiate the SoS

- **Conduct/Continue SoS Analysis:**

Provides analysis of the 'as is' SoS and basis for its evolution

- **Develop/Evolve SoS Architecture:**

Develops/evolves the persistent technical framework for SoS evolution and a migration plan identifying risks and mitigations

- **Plan SoS Update:**

Evaluates SoS priorities, backlog of SoS changes, and options to define plans for the next SoS upgrade cycle

- **Implement SoS Update:**

Oversees system implementations and plans/conducts SoS level testing, resulting in a new SoS product baseline

- **Continue SoS Analysis:**

Ongoing SoS analysis revisits the state of and plans for the SoS as the basis for SoS evolution

# Workshop Results - 1<sup>st</sup> Step

## Developing SoS Measurement Approach

### SoS Analysis

- Provides an analysis of the "as is" SoS, including
- Describe current SoS
    - CONOPS
    - Systems
    - System relationships
  - Assess performance against objectives
    - Expected performance
    - Actual (measured) performance
  - Fault isolation
    - Source of gaps

### SoS Architecture

- Technical analysis of changes or alternatives to the current architecture to improve SoS effectiveness or performance
- New, added, different or updated systems in current architecture
  - New architecture with new ways to organize and employ systems
- Produces recommendations for changes

### Plan SoS Update

- Evaluate SoS priorities, options and backlogs
- Define the plan for the next SoS upgrade cycle.

### Implement SoS Update

- Systems
- Implement and test changes systems
  - SoS SE team leads SoS integration and test
- SoS SE
- Monitors system implementation
  - Conducts SoS testing
  - Addresses unanticipated factors encountered

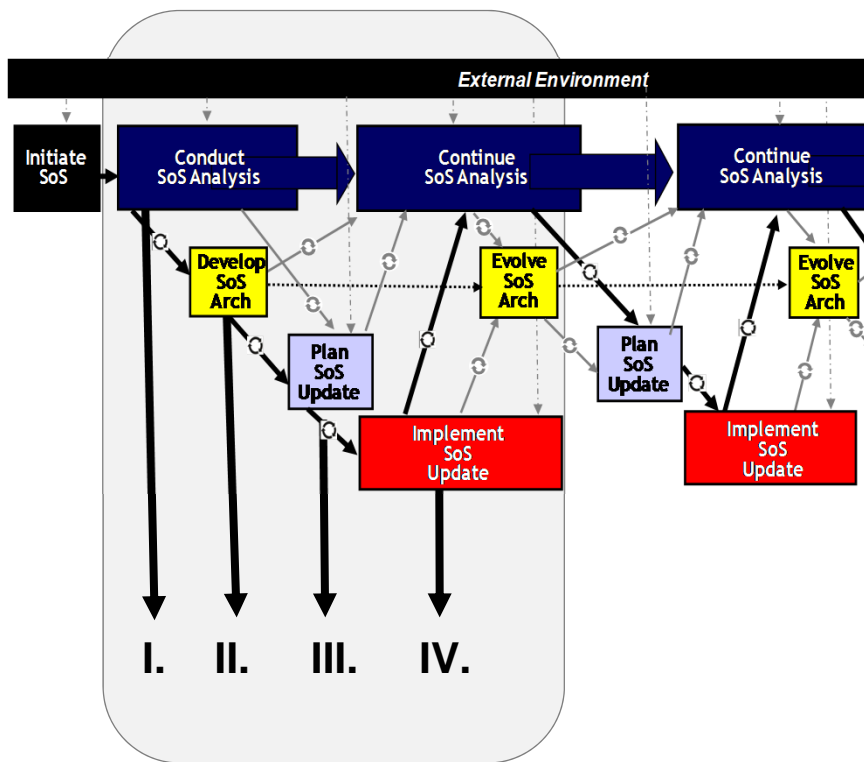

- On technical management measures - many ICM elements apply directly to SoS management
- On technical measures - integrating across wave model steps, extract **questions** and driving **measurement concepts** for systems and SoS

Area	Measurement Concept	Questions
SoS	Effectiveness	What are top-level objectives for the SoS?
		Is the SoS achieving the user capability objectives?
		How do stress conditions impact SoS effectiveness?
		How does SoS performance impact SoS effectiveness?
		What are gaps between expected and observed SoS effectiveness?
		What are root causes of gaps?
		How alternative architectures compare in terms of SoS effectiveness?
		TBD
SoS	Performance	Is the SoS performing as expected?
		How do stress conditions impact SoS performance?
		How does the systems' performance impact SoS performance?
		TBD
System	Effectiveness	Do the systems maintain system level effectiveness when part of the SoS?
		Which systems have largest impact SoS effectiveness?
		TBD
	Performance	How are the systems performing in the SoS context?
		How do the systems contribute to the SoS?
		TBD

# 2017 Workshop – Next Step

## Measurement at Each Step the Wave Model

- **At each step (I – IV)**
  - What are the **questions** to be addressed?
  - What **measures** would you need?
    - Technical? Technical management?
    - At SoS level? At the system level?
  - What are the **measurement challenges**?
    - For technical and technical management
- **Start with acknowledged SoS**
  - Assess what is different for other types
